Professional Summary

Cloud Engineer with a Master's in Computer Science and over 3 years of experience designing, building, and maintaining secure AWS infrastructure. Proficient in optimizing cloud operations utilizing the AWS Well-Architected Framework, CI/CD automation, and Infrastructure as Code (AWS CDK, Terraform). Highly skilled in Python and boto3 for scripting workflows. Proven track record of enforcing strict IAM security governance, leveraging JIRA for agile operations, collaborating closely with data teams, and consistently driving significant cloud cost optimization initiatives.

Technical Skills

Cloud Technologies: AWS, S3, EC2, Lambda, DynamoDB, RDS, ECS, CloudWatch, CloudTrail, VPC, EventBridge

Infrastructure & Security: AWS CDK, CloudFormation, Terraform, IAM, KMS, Secrets Manager, API Gateway

Languages & Tools: Python, SQL, Java, Shell Scripting, Git, Jenkins, JIRA Service Management, Docker

Experience

Amazon | Baltimore, MD

Software Development Engineer

June 2025 - Present

- Automated global cloud infrastructure utilizing AWS CDK, CloudFormation, and Python, strictly adhering to the AWS Well-Architected Framework to ensure scalable and reliable platform solutions.
- Managed operational workflows and incident fulfillment via JIRA Service Management within an agile environment, collaborating seamlessly with cross-functional data and analytics teams.
- Implemented robust security best practices by designing IAM least-privilege policies, managing encryption via AWS KMS, and securing distributed production networks.
- Engineered a highly resilient data archiving architecture integrating AWS Lambda, DynamoDB, S3, and EventBridge, successfully processing 25M+ events daily.
- Led a comprehensive cloud cost optimization strategy that deprecated legacy tools and optimized resource allocation, yielding ongoing infrastructure savings of \$7,000/month.

Tata Consultancy Services | Hyderabad, India

Software Development Engineer

January 2022 - July 2023

- Developed scalable Python microservices deployed via Docker on AWS ECS, facilitating high-volume migrations and supporting data engineering platform development.
- Optimized CI/CD pipelines by engineering dynamic selection menus within Jenkins, streamlining build, test, and deployment automation for compliance-critical data environments.
- Authored custom Python scripts to automate workflows and parse structured log files via AWS CloudWatch, reducing system troubleshooting and RCA timelines by 20%.
- Automated server recovery and resilient disaster response across robust environments using Systems Manager and PowerShell, maximizing data platform uptime.
- Spearheaded a data infrastructure audit identifying unmanaged storage redundancies, proactively implementing automated S3 lifecycle deletion policies to save over \$6,000/month.

Projects

Memory Hierarchy Simulator | *Python, Computer Architecture*

- Engineered a Memory Hierarchy Simulator in Python, modeling virtual-to-physical address translation and analyzing multi-level cache behaviors including DTLB and L2 structures.
- Implemented Least Recently Used (LRU) algorithms and varying cache write policies to analyze performance efficiency metrics like hit/miss ratios and disk access statistics.

Density-based Traffic Control System | *C, IR Sensors, Arduino IDE*

- Architected an IoT traffic control system in C that dynamically adjusts signal timing based on real-time hardware data, showcasing strong independent problem-solving abilities.
- Utilized Arduino IDE to develop custom algorithms for processing IR sensor feeds, optimizing embedded operational logic and system reliability.

Education

Florida State University | *Master of Science in Computer Science*

August 2023 - May 2025

Koneru Lakshmaiah University | *Bachelor of Technology in Computer Science and Engineering* August 2018 - May 2022
